

ABSTRACT**FUEL INJECTOR ARRANGEMENT**

- 5 A prefilmer for a fuel injection arrangement comprising a body having a fluid flow surface and a downstream edge, the prefilmer arranged so that when working in operative association with the fuel injection arrangement fuel flows over the surface, by means of a passing airflow, to the downstream edge, from where the fuel is shed, characterised
10 in that the prefilmer further comprises a fluid flow mixing means to, in use, enhance the mixing of fuel and air.
